

What Is Yoga Therapy?

Although all yoga is potentially therapeutic and healing, yoga therapy is the specific application of yogic tools—postures/exercises, breathwork, meditation techniques, and more—to address an individual's physical, mental, and emotional needs. Many people first learn about yoga through its physical practices, but a common misconception is that the discipline is all about stretching or movement. In fact, yoga therapy can help people who can't move at all, as well as active individuals!

The yogic model of health is unique because it addresses every aspect of life rather than considering each body part or system separately.

What Conditions Can Yoga Therapy Help?

Yoga therapy is a safe way of working with the natural capacity of your body and mind to optimize well-being. Because yoga itself offers tools that touch on the whole spectrum of human experience,

yoga therapy can offer support for a range of concerns:

- Pain from various sources
- Major illnesses
- Neurologic issues
- Healthy aging
- Mental health
- Death and dying

Yoga therapy can also support people who are dealing with stress, and those who simply want to increase their overall well-being. Learn more at yogatherapy.health

What's the Difference Between Yoga & Yoga Therapy?

A general public yoga class can certainly ease everyday aches, pains, and mood complaints. But a yoga therapy session goes much further because it is completely tailored to the individual. IAYT-certified yoga therapists have in-depth training to help them assess and keep clients safe, and to interact with other healthcare professionals effectively.

Yoga therapy can complement a client's usual healthcare.

How Does Yoga Therapy Work?

Although yoga has been practiced in some form for millennia, we are just beginning to understand these mechanisms from a Western scientific perspective.

A tool applied in one area—say, a breathing practice—can profoundly affect a completely different area of the body or the mind. Researchers think this works partly because of yoga's ability to regulate the nervous system and possibly to affect the way the brain processes information. Another reason yoga therapy works so well is that it's not a treatment done *to* a patient—yoga therapists instead empower clients to tap into their own innate healing capabilities.
